05 판다스를 활용한 데이터 이해

학습 내용

- 캘리포니아 데이터 살펴보기
- 원하는 데이터를 선택하는 것을 실습을 통해 알아본다.

01 캘리포니아 데이터 가져오기

```
In [ ]: | import pandas as pd
In []: print("pandas 버전 ", pd.__version__)
         pandas 버전 1.2.4
         test = pd.read csv("../data/california/california housing test.csv")
In [ ]:
          train = pd.read csv("../data/california/california housing train.csv")
         ### 데이터 확인
In [ ]:
          print("test 데이터 셋 행열 크기 :", test.shape)
         print("train 데이터 셋 행열 크기 : ", train.shape)
         test 데이터 셋 행열 크기 : (3000, 9)
         train 데이터 셋 행열 크기 : (17000, 9)

- 1. longitude: A measure of how far west a house is; a higher value is farther west
- 1. latitude: A measure of how far north a house is; a higher value is farther north
- 1. housingMedianAge: Median age of a house within a block; a lower number is a newer building
- 1. totalRooms: Total number of rooms within a block
- 1. totalBedrooms: Total number of bedrooms within a block
- 1. population: Total number of people residing within a block
- 1. households: Total number of households, a group of people residing within a home unit, for a block
- 1. medianIncome: Median income for households within a block of houses (measured in tens of thousands of US Dollars)
- 1. medianHouseValue: Median house value for households within a block (measured in US Dollars)

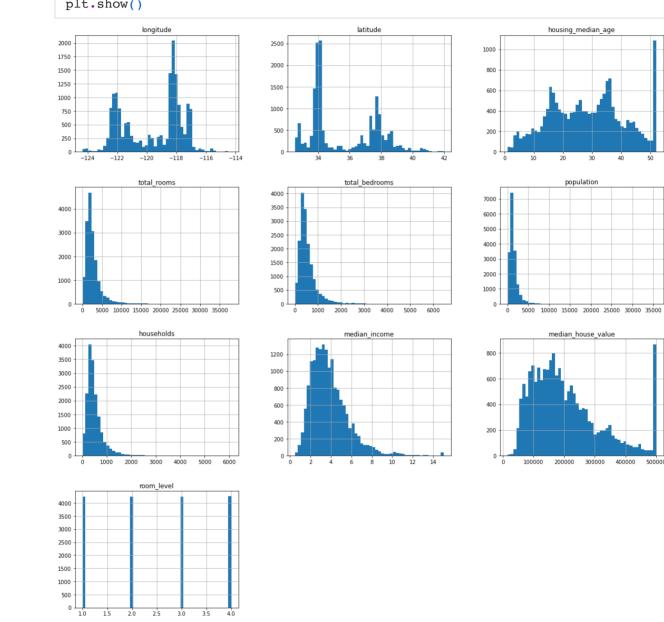

데이터 셋 설명

가	의미	기 본 값
longitude	집이 서쪽으로 얼마나 떨어져 있는지를 나타내는 척도. 집이 서쪽으로 얼마나 떨어져 있는지를 나타내는 척도. 더 높은 값은 서쪽으로 더 멀리 있다	
latitude	주택이 북쪽으로 얼마나 떨어져 있는지를 나타내는 척도. 더 높은 값은 북쪽으로 더 멀리 있음.	
housingMedianAge	블록내 주택의 중간값 연식. 낮은 숫자는 최신 건물	
totalRooms	총 객실 수	
totalBedrooms	블록 내 총 침실 수	
population	블록 내에 상주하는 총 인원 수	

households	주택 단위 내에 거주하는 가구 그룹인 블록의 총 가구 수	
medianIncome	한 블록 내 가구의 중위 소득(미국 달러 수만달러로 추정)	
medianHouseValue	블록 내 가구의 중위 House Value(미국 달러로 추정)	

02 기본 시각화

```
